## CANALI DI GRONDA SU MISURA

Si realizzano canali di gronda e scossalina a misura nei diversi materiali (Rame - Inox - Preverniciato - Alluminio) fino ad una **larghezza massima di mm 6000**.

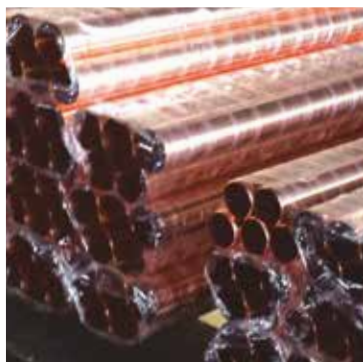

In questi casi i sostegni vengono realizzati a misura solo interni (vedi disegno) e sprovvisti di fori per il fissaggio sul tetto.

**Esempio di gronda con sostegno interno**

| MATERIALI                  | DIMENSIONI |                              |                      |       |
|----------------------------|------------|------------------------------|----------------------|-------|
|                            | Ø 60       | Ø 80                         | Ø 100                | Ø 120 |

# COPPERLINE

## Linea Alu

### Caratteristiche Tecniche

|                        |                              |                       |
|------------------------|------------------------------|-----------------------|
| Normative              | EN 1396/485/515/573          |                       |
| Metallo di base e lega | Alluminio 99,5 % - lega 3105 |                       |
| Stato fisico           | H44                          |                       |
| Pacchetto vernice      | Lato A: 40μ                  | Lato B: 15μ           |
| Colore                 | Lato A: rame antichizzato    | Lato b: back in tinta |

### Caratteristiche dimensionali dei Nastri

|                    |                                                                      |
|--------------------|----------------------------------------------------------------------|
| Spessori           | 0,70 - 0,80 - 1,00 - 2,00 mm                                         |
| Larghezze standard | 250 - 280 - 330 - 400 - 417 - 500 - 600 - 670 - 750 - 1000 - 1250 mm |

### Caratteristiche dimensionali dei Tubi

|                               |                  |
|-------------------------------|------------------|
| Spessore                      | 0,70 mm          |
| Diametri e lunghezze standard | 60 - 80 - 100 mm |
| Lunghezze                     | 2 - 3 - 4 mt     |

Risultati delle prove di laboratorio eseguito presso:

| Campione | Prove         | Norme   | Risultati |
|----------|---------------|---------|-----------|
| ALU      | UV TEST       | EN 4892 | ΔE 0,31   |
|          | NEBBIA SALINA | EN 9227 | 250 h     |

Conclusione: dopo 250 h di esposizione a raggi UV non si notano variazioni di colore visibili ad occhio nudo.  
Dopo 250 h di esposizione in nebbia salina non si rileva nessun degrado all'interno dell'area dei provini.
